

ELEVATE.ORG App Summary

What it is

A React + Vite web app for ELEVATE, a youth-led nonprofit focused on teen health education and advocacy. The site presents mission, projects, partners, learning content, and contact paths.

Who it's for

Primary persona: students/teens and youth advocates; secondary audiences include parents, schools, and partner organizations.

What it does

- Provides routed pages for Home, Our Story, Team, Contact, Projects, Partners, and Learn sections.
- Highlights Teen Vaping Awareness and Adolescent Obesity initiative pages.
- Shows partner profiles for Genesis Foundation and Building Blocks Foundation.
- Offers learning tracks such as Tutoring & Education and Fitness.
- Uses Framer Motion and Lucide icons for animated, mobile-friendly UI interactions.
- Implements Netlify-compatible contact submission with URL-encoded POST and honeypot.

How it works (repo-evidenced architecture)

- Entry/runtime: `src/main.jsx` mounts `<App />` inside `BrowserRouter` under `React.StrictMode`.
- Composition: `src/app.jsx` renders persistent `Header` plus route-based page components.
- Styling: Tailwind CSS utilities in JSX plus `src/index.css` and `tailwind.config.js`.
- Content/data: static text/media from `src/assets/*`; no database models found in repo.
- Service integration: contact form posts to `'/'` with Netlify attrs; backup form in `public/netlify-forms.html`.
- Backend/API/Auth: Not found in repo (no server code, API client layer, or auth wiring detected).

How to run (minimal)

- From repo root: `npm install`
- Start dev server: `npm run dev`
- Open Vite local URL (typically `http://localhost:5173`)
- Optional production check: `npm run build` then `npm run preview`

Evidence basis: `README.md`, `package.json`, `src/main.jsx`, `src/app.jsx`, `src/components/Header.jsx`, `src/pages/Home.jsx`, `src/pages/Contact.jsx`, `public/netlify-forms.html`.
